

Transtank reduces client refueling turnaround from 8 hours to 45 minutes

Transtank suits M&T Commercial South Africa to a "T"

South Africa based company M&T Commercial, a division of M&T Developments, specialize in A-grade office parks, convenient retail centres, modern medical facilities, up-market warehousing retailing and home unit developments. They are constructing 1700 home units for the newly modern 'Wonder Park Estate', one of many of their projects in the Pretoria Region.

Transtank South Africa recently played a key role in improving M&T Commercial's efficiencies on-site, delivering a T30 (30,000 litre) Transtank fuel solution, fully equipped with diesel-powered 100 litre per minute pump assembly to M&T's 'Wonder Park' site.

The portable self bundled on-site fuel storage and dispensing equipment has seen M&T reduce its refueling turn-around times from 8 hours per day to an incredibly efficient 45 minutes per day. Previously, M&T were a running 2,000 litre mobile fuel trailers (mounted on a LDV) back and forth to a local filling station, making it a full 8-hour per day operation.

M&T can have around 80 earthmoving and construction vehicles on site at any one time. The time, cost and productivity savings afforded by an on-site Transtank are enormous:

- reduced fuel costs arising from savings negotiated on bulk fuel drops; rapid and efficient pumping capacity reduces equipment down-time;
- safe fuel storage with minimal environmental impact (no fuel spills, anti-theft);
- 24-hour secure access to fuel; and the ability to monitor fuel usage increases accountability.

This initiative was brought to M&T by Transtank South Africa, working in partnership with Masana Petroleum (M&T's current fuel supplier) to provide fuel solutions to clients.

www.transtank.com

- Savings from bulk fuel drops
- Safe for environment
- Rapid pumping capacity
- Fuel available on demand, on-site
- Secure anti-theft 24 hour access
- Self bundled - minimal site preparation
- ISO approved means truly intermodal
